

Are outdoor base stations safe

Are base stations dangerous?

This includes base stations, cell sites, and mobile devices. Since the base station and the devices connected to utilize low power radio waves, they aren't considered to be dangerous, so long as the antenna portion of the station is kept at a safe distance from anyone nearby.

Is a cellular base station safe?

Like other radio towers, such as those used in broadcast radio and television, the use and construction of a cellular base station is regulated by the FCC, and the RF energy levels it can produce fall well below levels considered to pose a threat to health. The antennas themselves must be kept inaccessible to the public, and at a safe range.

Are radio base stations harmful?

The WHO states: "From all evidence accumulated so far, no adverse short- or long-term health effects have been shown to occur from the RF signals produced by base stations." (WHO fact sheet "Base stations and wireless technologies") Mobile phones and mobile devices require a network of radio base stations to function.

Do mobile phones need a base station?

Mobile phones and other mobile devices require a network of base stations in order to function. The base station antennas transmit and receive RF (radio frequency) signals, or radio waves, to and from mobile phones near the base station. Without these radio waves, mobile communications would not be possible.

How much exposure can a radio base station have?

On the ground, in houses, and other places where people reside, the exposure levels from radio base stations are normally below 1 percent of the limits. Only in the close vicinity of the antennas can the exposure limits sometimes be exceeded.

Can unauthorized people access a base station?

The antennas are installed in such a way that unauthorized people do not have access to the area where the limits may be exceeded. This holds true whether the base station is part of a 2G (GSM), a 3G, a 4G (LTE) or a 5G network.
