

Can solar panels be used to build a sunroom

Should you add a sunroom to your home?

Sunrooms, filled with sunlight and cozy patio furniture, are the ideal spot to unwind with a beverage and a good book. When you add a sunroom, these transitional spaces connect your home with the outdoors while protecting you from the elements, allowing you to enjoy the best of indoor and outdoor living at the same time.

Can a solar room be used to build a house?

You can build your house compactly and the solar room will provide a feeling of large exterior wall and window area. Growing Plants; some things to remember An important function of some solar rooms is the growing of food-and flowers. Warm soil and sufficient light are critical for successful plant growth.

Can a sunroom function as a greenhouse?

Follow these principles when building a sunroom addition and you can get the triple benefits of a cozy living space, free solar heat, and a super greenhouse for plants.

What is a good U-value for a sunroom?

The typical U-value is 1.6. If you can't build your sunroom in the location that will keep it the most comfortable, or you want more hours to enjoy your all-season room, consider these options: Add operative skylights to act as heat dumps when the room gets too warm. Intersperse prefabricated insulating roof panels among the glass roof panels.

Is it necessary to heat a sunroom?

If you apply these principles, you shouldn't need to heat a sunroom -- you will be able to keep this living space at a comfortable temperature by using natural systems. Would a sunroom work for your house?
