

Finland electric solar power generator for home use

Does Finland have solar power?

There is plenty of solar energy available in Finland, and solar power is predicted to be one of the lowest-cost electricity production methods in the coming years.

How will a hybrid energy system work in Finland?

In Finland, a number of hybrid projects are in the pipeline, combining wind, solar and also energy storage. These solutions will balance our energy system. On a global scale, solar power is one of the fastest growing forms of energy generation - its size and importance in the world's energy mix is huge, larger than wind power.

Does Finland need wind power?

In addition to wind power, we also need plenty of solar energy, for which Finland has excellent prospects. Solar power is particularly well suited as a counterpart to wind power. These two emission-free energy sources complement each other: solar energy is available in summer and during the day, while the highest winds occur on average in winter.

Why is industrial-scale solar power production becoming more common in Finland?

As technology develops, industrial-scale solar power production is also becoming more common in Finland. Finland is undergoing a major energy transition. Moving away from imported fossil fuels and towards local, clean energy production will create the basis for new industrial investment.

How much solar energy will Finland produce by 2050?

LUT has modeled an emission-free energy system and demonstrated that the share of solar energy in Finnish energy production should rise to 10 percent by 2050. That would mean a leap from the current 635 megawatts to 35 000. The rooftop potential of all Finnish buildings (residential, administrative, industrial) is about 34 000 megawatts.

Can solar power improve the profitability of buildings in Finland?

LUT University has investigated how the profitability of solar electricity could be improved in different types of buildings in Finland. Researchers have debunked myths related to the orientation and dimensioning of solar photovoltaic systems and sales of surplus electricity.
